

FEATURED PROJECT
WINDWARD PALMS
TOWNHOMES

Windward Palms is an upscale townhome project in Myrtle Beach. This five-unit, three story building was designed to maximize space with attention paid to energy design consideration.

The architecture reflects Charleston influences while blending with the Myrtle Beach style. The slight changes between units adds to the character of the over-all building. Designed with custom windows, doors and tray ceilings, the developer adds the luxury of some counters and custom cabinets.

The design team worked close with the developer to find the "right brick" for the exterior by asking the brick manufacturer to make a brick that had the look of "old Savannah."

EARTHWORKS' Building Services

The EARTHWORKS Group can provide the Building Design Services that you need to develop your project. We provide a full range of architectural, structural, mechanical, electrical, and plumbing design services under one roof, making us your one-stop shop to complete your project. We use the latest CAD technology to ensure accurate designs which integrate multiple layers of information, while meeting the current building code requirements.

We also provide Construction Administration services to ensure that the contractor provides the building that you are paying for — "a successful project does not cut corners". EARTHWORKS team members are skilled at navigating regulatory requirements to limit risks and enhance possibilities. In all our work, we are guided by strong ethical principles and a cooperative spirit with our client, design team, construction partners, and the regulatory community. Careful monitoring during the construction process allows us to provide outstanding quality assurance.

The services provided by our Building Design Team draw on the expertise of staff members skilled in all aspects of construction — Mechanical, Plumbing and Electrical systems; Foundations and Structural components; Project Management.

We also provide Landscape Architecture to integrate the site hardscapes and landscaping, and the civil site design, so you have a complete project. Our Building Design Team takes your ideas and translates them into detailed construction documents, showing the details of the buildings, such as the foundation, wall sections, mechanical systems, and finish schedules.
